ABOUT

Systems builder, AI safety researcher, and adversarial thinker — writing code since age six, with fifteen years of applied infrastructure, security, and delivery across government, university, and campaign organisations. The failure-first methodology didn't come from papers — it came from coordinating communications and logistics for Greenpeace's Actions unit against well-resourced opponents where getting the risk assessment wrong had real consequences. That operational security instinct runs through everything: leading the cybersecurity uplift for Tasmania's public housing sector — translating the ~900-control ACSC ISM into a tracked delivery program alongside Essential Eight and IDAM work; an adversarial evaluation practice spanning 257 models and 142,068 adversarial prompts across 346 attack techniques; and production AI systems with hallucination detection and content safety gates built in from the start. Currently freelancing across client delivery (healthcare ecosystems, multilingual sites, ops tooling) and independent AI safety research. AuDHD — the hyperfocus and pattern recognition are features, not bugs. Most interested in where complex systems break and what that reveals about how they were built.

CORE COMPETENCIES

AI Safety & Evaluation
Red-teaming, adversarial testing, failure-first methodology

Frontier AI Models
Claude API, multi-agent systems, evaluation frameworks

Risk Assessment
Pre-mortem analysis, FMEA, failure mode identification

Policy Translation
Technical findings to actionable governance for decision-makers

EXPERIENCE

Freelance Developer & AI Consultant

Independent Jan 2025 - Present

Client web delivery and independent AI safety research, transitioning from seven years in government. Small client base by design — deep engagement over volume. Specialising in red-teaming, adversarial testing, evaluation frameworks, and failure-first methodology for frontier AI models. Building multi-agent systems, LLM tooling, and open-source AI safety infrastructure.

- Designed and built red-teaming and adversarial testing framework for embodied AI with automated attack adapters (TAP) and cross-modal vulnerability research on VLA models
- Developed evaluation frameworks with hallucination detection, content safety gates, and model monitoring for production LLM pipelines
- Applied prompt engineering, RAG, and retrieval-augmented generation across multiple agentic systems
- Delivered four-site healthcare digital presence with AHPRA regulatory compliance and REST API integration
- Built 10+ active open-source repositories: agent orchestration, AI governance, NLP tooling, and CLI automation
- Designs and operates agentic AI workflows daily — multi-step agent pipelines gated by automated tests and evaluation-first CI harnesses
- Built rlm-mcp, an MCP server for 1M+ token document processing with BM25 retrieval and artifact provenance tracking

`Python, JavaScript, TypeScript, Node.js, Cloudflare Workers, MCP, Claude API, Prompt Engineering, RAG, Red-teaming, Adversarial Testing, Evaluation Framework, Hallucination Detection, Content Safety, Multi-Agent Systems, GitHub Actions, Docker,`

FastAPI, NLP

Systems Analyst / Acting Senior Change Analyst

Homes Tasmania (formerly Department of Communities Tasmania)

May 2018 - Feb 2026

Led systems integration, security uplift, and digital transformation for Tasmania's public housing sector — an agency holding sensitive personal data on vulnerable Tasmanians. Built the department's ISM-aligned security program and the automation and integration backbone of a regulated system-of-record environment. Acting Senior Change Analyst, Feb–Nov 2023.

- Designed and implemented RESTful API integrations and SFTP data exchange for the Housing Management System
- Built the department's ISM-aligned security program: interpreted ~900 ACSC ISM controls across 22 guideline domains into a structured, owned, trackable delivery program; led the cybersecurity uplift across Essential Eight and IDAM
- Implemented identity and access management (IDAM) controls reducing unauthorised access risk
- Built Python and PowerShell automation scripts for operational workflows, reducing manual processing time
- Wrote the department's first generative-AI policy, governing responsible AI adoption before deployment in a regulated human-services environment
- Contributed to ICT policy development and audit processes for departmental compliance

Python, PowerShell, JavaScript, RESTful APIs, SFTP, SQL, Azure, ACSC ISM, IDAM, Essential Eight, Prompt Engineering

---

ITS Client Services Officer

University of Tasmania 2015 - 2018

IT support across the full university user base — researchers, academics, administrative staff. Exposure to an unusually wide range of systems and problems built the diagnostic instinct that carries through everything since.

- Sole support contact for a diverse user base with no tolerance for downtime — learned to triage fast and fix faster
- Built and maintained procedural documentation that actually got used, reducing repeat escalations
- Managed Microsoft 365 and Active Directory environments across a complex multi-faculty structure
- Handled ServiceNow ticketing and escalation paths for infrastructure issues beyond first-line scope

`Microsoft 365, Windows Server, Active Directory, ITIL, ServiceNow`

Director

Digital Agency PTY LTD 2015 - 2018

Ran a small digital agency focused on nonprofits and small businesses — Google Grants, AdWords, Analytics, and web presence. Learned quickly that clients don't buy strategy; they buy outcomes they can point to.

- Built and managed Google Ad Grants campaigns for nonprofits, maximising the $10k/month allowance to drive real audience growth
- Set up Analytics and conversion tracking from scratch for clients with no prior measurement — made their spend legible
- Delivered web and campaign work across diverse sectors: environmental orgs, health practitioners, retail
- Managed client relationships end-to-end: scoping, delivery, reporting, iteration

`Google Analytics, Google AdWords, Bing Ads, Digital Marketing, Campaign Management`

Second Level IT Support Engineer

The Wilderness Society Inc. 2012 - 2015

End-to-end IT infrastructure ownership for a national environmental organisation with distributed operations across Australia. Responsible for all server environments, network infrastructure, and communication systems — the kind of breadth that builds genuine systems thinking.

- Owned lifecycle management of 60+ Windows/Debian/Ubuntu servers across a nationally distributed organisation
- Maintained heterogeneous network infrastructure with no dedicated team — full-stack from physical layer to application
- Built and administered Google Apps and VOIP PBX infrastructure replacing legacy systems
- Executed complex migrations and decommissioning with zero data loss across diverse environments
- Delivered ICT capability to teams with no technical background, building organisational resilience

`Windows Server, Debian/Ubuntu, Network Infrastructure, Google Apps, VOIP PBX, Server Management`

Actions Unit — Communications & Logistics Coordinator

Greenpeace Australia Pacific 2010 - 2012

Operational planning and execution for Greenpeace Australia Pacific's direct action campaigns. The Actions unit operates against well-resourced opponents, and the work required genuine operational security, threat modelling, and risk assessment under conditions where failure meant people getting hurt or arrested.

- Planned and coordinated direct action operations — logistics, communications, and security across multiple simultaneous campaigns
- Developed threat models and operational security protocols for campaigns facing well-resourced opponents

- Designed and maintained field ICT infrastructure for direct actions, including encrypted communications and secure channels
- Conducted pre-action risk assessments enumerating failure modes, contingency routes, and abort criteria
- Trained activists in operational security and secure communications under pressure
- Coordinated multi-team logistics across geographically distributed operations with real-time adaptation to adversarial conditions

`Operational Security, Threat Modeling, Risk Assessment, Encrypted Communications, Field ICT, Logistics Coordination, Adversarial Planning`

DJ / Multimedia Artist / Freelance Technologist

Independent ~2000 - 2010

A decade of freelance work across music, multimedia art, and technology. DJing, audio production, visual art, and building whatever clients or collaborators needed. The thread through all of it was systems — sound systems, visual systems, technical systems — and the instinct to build tools rather than just use them.

- Professional DJ across venues and events, managing PA systems, lighting rigs, and live audio
- Created multimedia art installations combining audio, visual, and interactive elements
- Freelance web development and technical consulting for small businesses and artists
- Built early web presences for clients with no digital footprint, learning full-stack by necessity

`Audio Production, Web Development, Multimedia, Live Sound, Creative Technology`

PROJECTS

This Wasn't in the Brochure Website

Practical, neurodiversity-affirming guide for co-parents raising children with ADHD, Autism, PDA, and ODD. The first book written specifically for the co-parenting context. Four localised editions (AU, US, UK, NZ) with culturally-appropriate legal, medical, and educational systems. Companion children's book in development.

`Technical Writing` `Neurodiversity` `Research Synthesis`

NotebookLM Automation GitHub Website

CLI automation toolkit for Google NotebookLM with research quality controls, deterministic exports, template engine, JSON schema validation, and comprehensive integration testing.

`Bash` `Python` `CI/CD` `JSON Schema`

Orbitr GitHub Website

Multi-track polyphonic AI sequencer with concentric ring interface. Inspired by Playtronica's Orbita, enhanced with Meta's MusicGen for real-time sample generation. 36 issues tracked across phased delivery.

`HTML/CSS/JS` `MusicGen` `Web Audio API`

Evolve Evolution Website

Four-site digital presence for a healthcare practitioner: AHPRA-compliant chiropractic clinic site, coaching/personal brand platform, author hub, and business evolution site. Shared CSS design token system, Cliniko API integration for appointment management, GA4-to-GTM analytics migration, Cloudflare Pages deployment with serverless functions, and quarterly regulatory compliance workflow. 170+ issues tracked across phased delivery.

`HTML/CSS/JS` `Cloudflare Pages` `Cliniko API` `GA4/GTM` `Structured Data`

Tanda Pizza Website

Static website for a Bali-based restaurant, localized to 5 languages with WhatsApp ordering integration and gluten-free menu filtering.

`HTML/CSS/JS` `i18n` `WhatsApp API`

Failure-First Embodied AI

GitHub Website

Red-teaming and benchmarking framework for embodied and agentic AI systems. Focused on adversarial testing, recursive failure analysis, recovery evaluation, and human-in-the-loop safety. Includes computer vision vulnerability research on VLA models, neural network robustness evaluation, automated attack adapters (TAP), cross-modal failure analysis, prompt injection and jailbreak testing, bias detection, interpretability analysis, model evaluation pipelines, and AI ethics documentation.

`Python` `AI Safety` `Red-teaming` `Adversarial Testing` `Computer Vision` `Neural Networks` `Model Evaluation` `AI Ethics` `Prompt Injection` `Bias Detection` `Robustness` `Interpretability` `Evaluation Framework` `Content Safety` `Responsible AI` `Deep Learning` `NotebookLM` `arXiv`

TEL3SIS

GitHub Website

Real-time telephony platform with LLM-powered conversations, tool use (calendar, SMS, email), tri-layer memory (Redis/SQLite/vectors), safety oracle for pre-execution checks, and human handoff. Built on vocode-python with Whisper, GPT-4, and ElevenLabs.

`Python` `Vocode` `Whisper` `Redis` `Docker`

Afterwords

Website

Give Claude Code a voice. Local zero-shot voice cloning TTS server for Mac — clone any voice from a 15-second YouTube clip and run it on Apple Silicon. Pairs with Claude Code for full voice conversations. No cloud API, no subscription, no data leaves the machine. ~15 voices included out of the box.

SPARK Website

Claude-powered robot companion for a neurodivergent child, built on SunFounder PiCar-X and Raspberry Pi 5. Voice-controlled robotics platform with three-layer cognitive architecture and REST API. Designed around the AuDHD frameworks from This Wasn't in the Brochure.

Wolf Clan Zen Do Kai Website

Public website and private operations hub for Wolf Clan Zen Do Kai martial arts club. Club information, blog with historical research, class schedules, and an authenticated hub for instructors with lesson plans, grading records, and knowledge base.

ACHIEVEMENTS

Published Author — This Wasn't in the Brochure

Wrote and published a neurodiversity-affirming guide for co-parents raising children with ADHD, Autism, PDA, and ODD. Four localised editions (AU, US,

UK, NZ). Built using a three-AI collaborative workflow as an executive function accommodation — documented transparently in the book's appendix.

2025

Security & Systems Uplift — Homes Tasmania

Led the cybersecurity uplift and systems integration for Tasmania's public housing sector: translated the ~900-control ACSC ISM into a structured, trackable delivery program, worked across Essential Eight and IDAM, and built RESTful API integrations for the Housing Management System. Infrastructure that vulnerable people depend on — the stakes made the work serious.

2018 - Feb 2026

AI Safety Research & Red-Teaming

Developed failure-first red-teaming framework for embodied AI systems — 257 models evaluated against 142,068 adversarial prompts spanning 346 attack techniques, with cross-modal vulnerability analysis on VLA models, automated attack adapters, and a drift-detection pipeline. Pursuing commercial AI safety services.

2025-2026

Voice-First AI Agent Platform

Built TEL3SIS, a real-time telephony platform with LLM-powered conversations, tri-layer memory architecture, safety oracle, and tool orchestration across 226 tracked issues.

2024-2026

Technology for High-Stakes Campaigns

Maintained distributed IT infrastructure across The Wilderness Society's national operations and built field technology for Greenpeace direct actions — two very different threat models, both requiring the infrastructure to be invisible until it isn't.

2010-2015

EDUCATION

Self-Directed AI & Machine Learning Study

2018 - Present

Independent Study

Ongoing self-directed learning covering AI/ML, autonomous systems, and emerging technologies through courses, research, and building projects.

Computer Science Foundation

2000 - 2018

Self-Taught & Professional Experience

Self-taught through two decades of professional projects, freelance work, and relentless curiosity. No formal degree — learned by building, breaking, and rebuilding.

First Code at Age 6

~1981

Microbee (BASIC)

Wrote first program at age 6 on a Microbee in BASIC — a morning routine sequencer with randomised audiovisual rewards. Built to compensate for undiagnosed ADHD executive function deficits. The instinct to build tools rather than endure problems started here and never stopped.

INTERESTS

- Zen Do Kai martial arts (Shodan, Sempai)
- Raising neurodivergent kids (thiswasntinthebrochure.wtf)
- DJing and audio production (former life, still wired in)
- 170 acres of Tasmanian bush — land stewardship and quiet
- Open source and AI safety research
- Where complex systems break and what that reveals
